EXAMINER
----------

LIN, KELVIN Y

ART UNIT	PAPER NUMBER
----------	--------------

2142

DATE MAILED: 06/22/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	10/695,928		RODRIGUEZ, PABLO R.	
	<b>Examiner</b>		<b>Art Unit</b>	
	Kelvin Lin		2142	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 17 April 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 10-35 is/are pending in the application.
- 4a) Of the above claim(s) 1-9 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 10-35 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 28 October 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

| Paper No(s)/Mail Date <u>1/07/04</u> .   | 6) <input type="checkbox"/> Other: _____                                    |

## **Detailed Action**

### **Election/Restrictions**

1. Applicant's election without traverse of Group II, claims 10-35, in the reply filed on 4/17/06 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 10-35 are rejected under 35 USC 102(e) as being anticipated by Nelson et al., (USPG PUB. 2003/0055975).
3. Regarding claim 10, Nelson discloses a method for retrieving a resource from a remote computer using a plurality of wireless network interfaces (Nelson, fig. 1, [0007], 1.8-12, [0030], in which it including wireless data network: wireless data packet networks, satellite data networks), comprising: receiving, from a computing device, a request for the resource (Nelson, [0093]), wherein the resource comprises a plurality of objects (Nelson, [0055]); terminating the received request (Nelson, [0052], 1.9-15); determining a number of available wireless network interfaces (Nelson, [0030], 1.3-12,

Art Unit: 2142

[0045] ); determining a number of objects in the resource and the size of each object (Nelson,[0054], [0058]); assigning each object to a specific wireless network interface (Nelson, [0054], [0058]); and transmitting a request for the resource, wherein the request specifies the specific wireless network interface assigned to an object (Nelson,[0051],[0063]).

4. Regarding claim 11, Nelson discloses the method of claim 10, wherein receiving a request for the resource comprises receiving a request from a computing device over a local communication network (Nelson, [0083]).

5. Regarding claim 12, Nelson discloses the method of claim 10, wherein determining a number of available wireless network interfaces comprises monitoring one or more characteristics of a wireless network interface (Nelson, [0076]) .

6. Regarding claim 13, Nelson discloses the method of claim 10, wherein determining a number of available wireless network interfaces comprises monitoring one or more characteristics of a wireless network interface, wherein the signal characteristic is selected from the group of signal characteristics consisting of: signal-to-noise ratio, available bandwidth, congestion, signal strength, connection cost, and bit error rate (Nelson, [0076]).

Art Unit: 2142

7. Regarding claim 14, Nelson discloses the method of claim 10, wherein determining a number of available wireless network interfaces comprises monitoring one or more characteristics of a wireless network interface stored in a data table in memory (Nelson, [0079]).

8. Regarding claim 15, Nelson discloses the method of claim 10, wherein determining a number of available wireless network interfaces comprises querying the wireless interfaces (Nelson, [0083]).

9. Regarding claim 16, Nelson discloses the method of claim 10, wherein determining a number of objects in the resource and the size of each object comprises querying the remote computer (Nelson, [0083]).

10. Regarding claim 17, Nelson discloses the method of claim 10, wherein assigning each object to a specific wireless network interface comprises assigning an object to two or more wireless network interfaces if the size of the object exceeds a threshold (Nelson, [0047], [0048], [0049]).

11. Regarding claim 18, Nelson discloses the method of claim 10, wherein assigning each object to a specific wireless network interface comprises assigning an object to two or more wireless network interfaces if the size of the object exceeds a threshold,

wherein the threshold is a function of the bandwidth of available wireless network interfaces (Nelson, [0047], [0048], [0049]).

12. Regarding claim 19, Nelson discloses the method of claim 10, wherein assigning each object to a specific wireless network interface comprises assigning an object to two or more wireless network interfaces if the size of the object exceeds a threshold, wherein the threshold is a function of the size of an object relative to the size of other objects in the resource (Nelson,[0053], [0054]).

13. Regarding claim 20, Nelson discloses the method of claim 10, further comprising: receiving objects over the plurality of assigned wireless network interfaces; and collating the received objects to construct the resource (Nelson, [0054], expert Group (MPEG-2) system, can be used to multiplex any digital signals with digitized video signals, including any packet data).

14. Regarding claim 21, Nelson discloses the method of claim 10, further comprising: transmitting the resource to the computing device that originated the request (Nelson, [0038]).

15. Regarding claim 22, Nelson discloses a computer-readable medium having computer-executable instructions for performing the method recited in claim 10 (Nelson, [0091]).

16. Regarding claim 23, Nelson discloses an apparatus, comprising:

Art Unit: 2142

at least one local communication network interface for receiving a request for a resource; (Nelson, [0083], the GDG receives the user request and initiate a connection to the desire destination party);

a plurality of wireless network interfaces for transmitting resource request over wireless communication connections (Nelson, fig. 1, element 110, [0030]);

a memory module (Nelson, [0079], GDG stores the database tables, memory module, to perform the mobility handling);

a processor executing logic instructions that configure the processor to:

terminate the received request (Nelson, [0052], CPE terminates the frame relay service);

determining a number of available wireless network interfaces (Nelson, [0030], I.1-12, fig. 1, element 180 );

determining a number of objects in the resource and the size of each object (Nelson,[0054], DBS system);

assigning each object to a specific wireless network interface (Nelson, [0054], DBS system).

17. Regarding claim 24, Nelson discloses the apparatus of claim 23, wherein the at least on local communication network interface comprises a wireless network interface (Nelson, [0083], the GDG) .

18. Regarding claim 25, Nelson discloses the apparatus of claim 23, wherein the plurality of wireless network interfaces comprises a first network interface for a first

wireless network service provider and a second wireless network interface for a second wireless network service provider (Nelson, Fig. 1, element 200-210).

19. Regarding claim 26, Nelson discloses the apparatus of claim 23, wherein the processor polls the wireless network interface to determine characteristics of the communication connections managed by the wireless network interface (Nelson, [0034], the data server include a plurality of interface unit for interconnecting to various data network).

20. Regarding claim 27, Nelson discloses the apparatus of claim 23, wherein the processor polls the wireless network on a periodic basis to determine characteristics of the communication connection managed by the wireless network interfaces (Nelson, [0082]).

21. Claim 28 has similar limitation as claims 27. Therefore, claim 28 are rejected for the same reason set forth in the rejection of claims 27.

22. Regarding claim 29, Nelson discloses the apparatus of claim 23, wherein the processor assigns objects to wireless network interfaces according to an algorithm that maximize bandwidth (Nelson, [0035]).

23. Claim 30 has similar limitation as claims 29. Therefore, claim 30 are rejected for the same reason set forth in the rejection of claims 29.

24. Claims 31-32, have similar limitation as claims 29-30. Therefore, claims 31-32 are rejected for the same reason set forth in the rejection of claims 29-30.

25. Claims 33-35, have similar limitation as claims 23-24. Therefore, claims 33-35 are rejected for the same reason set forth in the rejection of claims 23-24.

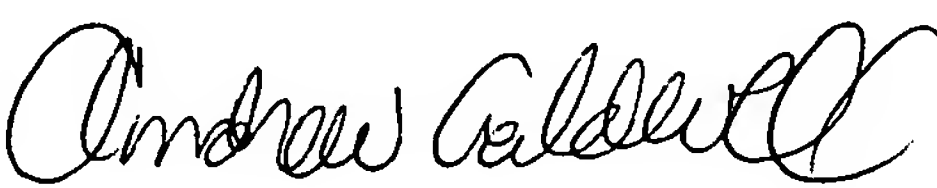

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kelvin Lin whose telephone number is 571-272-3898. The examiner can normally be reached on Flexible 4/9/5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Caldwell can be reached on 571-272-3868. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
